WARTIME WORRIES

With world conditions as they are today we are facing another serious situation with additional difficulties in shipping and supply to overcome. We've been through depressions, droughts, floods, and war—and we're still going on. Today—we still believe in Uncle Sam, Things Aquatic, and all they stand for.

If you will note, there has been no increase in the price of our Water Lilies and Plants for Pools. All other price increases on manufactured goods are beyond our control, handed down to us from the manufacturers. They are due primarily to increased costs of raw materials, packaging, and labor.

As we have in the past—in the future, we will continue to do our best to serve and supply you with only the best of "Things Aquatic"—speedy service at the right price! To you, our friends and customers—"Stay with us!"

There Is Something About A Lily Pool That Makes The Rest Of Garden Seem Commonplace

The principal value of aquatic gardening is as an enuring hobby—its purpose to offset the more serious side of life by bringing joy, happiness and relaxation.

Did you ever notice how much better you do a job when you're calm, relaxed, unworried?

A pool involves LITTLE space, LITTLE expense and LITTLE time or attention. Yet nothing else gives quite so much for so little. Aquatic life is fascinating—fishes glide through the depths, dragon-flies skim above, green pads unfold and waxy blossoms sparkle in the sunlight. The mystic lotus rises, breathing the lure of far away land.

Today we have a great need—for the comfort and solace which only Nature can provide—and we must be thankful that aquatic Plant Life is still abundant.

WE HOPE THAT YOU WILL ENJOY OUR CATALOG

Much time, effort, and serious thought have gone into the preparation of this catalog in order to present our products to you, our customers, in an honest endeavor to give you more dollar for dollar value.

Throughout our catalog we have listed only plants and merchandise that we ourselves have used, tested, and believe in. We have tried to picture and illustrate them well, and to describe them honestly and to the best of our ability.

If you would like one of these Catalogs sent to your friends—all you have to do is jot their name and address on a postal card and send it to us. We will be glad to send it to them immediately; or anytime you misplace your Catalog, let us know and we will send you another.

These WATER PLANTS provide the finishing touch to the perfectly balanced garden . . .

HERE are grouped those plants which grow in the water. They are varied and interesting, and give the much desired natural effect to the pool. They are easily grown. Most of them do best in shallow water and so the pots, boxes, or tubs should be raised to within two to eight inches of the surface.

These are wonderful possibilities with Water Plants to give your pool a unique and tropical appearance. Try a collection of Taro, Umbrella Palm, Papyrus and Primrose Willow, grouped together in a corner of the pool or in the center, or a collection of Primrose Willow, Parrot Feather and Forget-Me-Nots in a shallow corner of the pool.

For a natural pool use plenty of Japanese Iris planted right at the edge or in one to three inches of water. Our sturdy, healthy plants reach you ready to grow. If you have ever planted aquatics before you know the value of starting with good plants. Varieties marked with a (*) are particularly adapted to a depth of 6 to 12 inches.

Varieties marked with a (†) are suitable to plant at about 2 to 6 inches.

Varieties marked with a (§) are plants that like wet feet but with crowns and stems preferring the air and sunlight.

Varieties marked with a (§) are the beautiful Tropical Plants.

THE FOLLOWING PLANTS ARE PERENNIAL: Water Iris, Japanese Iris, Cattails, Cardinal Lobelia, Floating Heart, Forget-me-nots, Pickeral Plants, Parrot Feather, Var. Sweet Flag, Primrose Creeper, Cellophane Plant,, Flowering Rush, Arrowheads.

HEATERS

A good heater and thermostat is a small expenditure that more than pays for itself by the fish that didn't die. Since most aquarium fatalities are caused by temperature fluctuations a heater is practically a must in cold weather. Automatically controlled heaters are perhaps the greatest benefit ever devised for the tropical aquarium.

Correct size is important. Figure 4 or 5 watts per gallon capacity. (Example—for a 10 gal. aquarium—10x5—use a 50 watt heater). For safety and economy use a thermostat and pilot light with all heaters.

NOTE: A heater without a thermostat is not automatic. Nor will a Thermostat heat the water.

WARTIME WORRIES

As this catalog goes to press we are faced with an ever growing problem of "supply." Governmental restrictions and curtailment of raw material uses may mean that in the future certain manufactured goods may not always be readily available. It means that all of us may have to be temporarily satisfied with "second choices" to aid in the war effort. In the event that we cannot supply you with any of the items listed in this catalog we shall do our very best to suggest a suitable substitute. You may be assured that we will continue to do our best—always!

A Balanced Aquarium is Well Planted

A "balanced aquarium" is one in which the air surface of the water supplemented by the oxygen given off from the plants, provides sufficient oxygen in the water to support the life of the fish in the aquarium. The plants in giving off this life giving and water purifying oxygen, absorb harmful gases and carbon dioxide from the fish. It is the plants that keep the water fresh and clear, eliminating the necessity of changing the water in the aquarium.

Aquatic plants are the most important of the aquarium equipment and more than half the beauty. The natural beauty of aquatic plants serves as a pleasing background to enhance the exotic color of your fish.

Aquatic Plants need to be planted in "well-washed" aquarium gravel only; no soil is necessary. Gravel should be placed in the aquarium 2½ to 3 inches deep in the back, sloped to 2 inches deep in the front. Planting is done with the aquarium at least two thirds full of water. The roots of the plant should be gently pushed into the gravel and covered up to the crown, leaving the crown exposed. The arrangement of the plants in the aquarium is a matter of taste. Generally the taller plants are placed in the back with the smaller and more showy specimens towards the front. Plants require 8 to 10 hours of good light each day; they will grow equally well in sunlight or artificial light provided by an aquarium reflector.

We have listed in our catalog only those plants which we know from experience are best suited for growing in an aquarium. We are proud of our plants and consider them among the finest grown anywhere.

SCAVENGERS . . . for the Aquarium and Pool

AUSTRALIAN SNAIL

JAPANESE SNAIL

RED RAMSHORN SNAIL

FOUR HORNED SNAIL

POND SNAIL

BLACK RAMSHORN SNAIL

Be sure to have some scavengers in your aquarium. Scavengers consume the excrements of the fish, in fact any and all refuse which they find in the aquarium, and thus keep the water clean and in excellent condition. Scavengers placed by themselves in an aquarium are very interesting to watch. The Japanese Snails bring forth their young alive. The Water Newts and Turtles, while not as useful as Scavengers, are very entertaining.

TRAP DOOR SNAILS. (Japanese). These are the largest of the Aquarium Snails and are very hardy. One of the best varieties for use in outdoor pools. **2 for 25c; \$1.00 per dozen.**

BLACK RAMSHORN SNAILS. These are very attractive algae eaters. And are really a necessity in small water gardens. **6 for 25c.**

RED RAMSHORN SNAILS. Similar to the above except body and shell are coral-red. **Two for 25c.**

NEW PHILIPPINE SNAIL—"Horn of Plenty." A pygmy snail of dark brown color—live bearing—very prolific. I regard this snail very highly—in maintaining an aquatic garden—for its ability to eat up excess food. **3 for 25c.**

MYSTERY SNAILS. A very interesting "four horned" variety. Lays its eggs above water line and hatch in about three weeks. Shape similar to the trap door snail—another recommended variety for aquarium or pool. **2 for 25c; \$1.00 per dozen.**

TADPOLES. Must be sent by express in water. They can be shipped along with goldfish. **Two for 25c; 50c per dozen.**

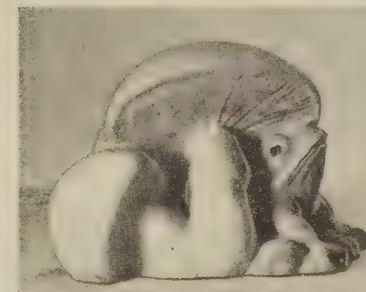

FRESH WATER CLAMS. **2 for 25c; \$1.00 per dozen.**

POND SNAILS. Small, but active workers. **6 for 25c.**

BABY GREEN TURTLES. Each 40c; 2 for 75c.

well as added beauty everywhere in the home. We have done our best to grow and list in our catalog, unusual and decorative plants that will thrive under ordinary home conditions. We make no bold or exaggerated claims—we state simply, "We try to do our best—always."

VENUS FLYTRAP

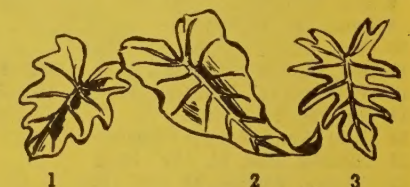

VENUS FLYTRAP (DIONAEA MUSCIPULA)

The most unusual and fascinating of all plants. This peculiar little plant with its brilliant green, fringed, insect devouring traps, draws its nourishment from the soil and from the insects which it catches and digests. These traps are bi-valvular in action and can distinguish between an edible or inedible object. An edible object, a fly, beetle, or another unwary insect, is digested in about eight days. Digestive juices within the hairy trap accomplish this process. The trap then reopens for another meal. In the spring a central flower stalk is sent up which bears white flowers. An ideal terrarium plant; grows best in loose, peaty soil, mixed with sand, with sphagnum moss on top to hold moisture. 50c each
